

Famous for protection

Jiffy Fruit & Cushioning Pads

If you have established your reputation as a supplier of quality produce, you need a supplier of quality protective packaging to ensure that your products arrive in top quality condition.

Jiffy Fruit & Cushioning Pads

Jiffy fruit pads are made from macerated recycled paper fibres sandwiched between layers of paper to form a thick cushioning pad. Fruit pads gently cushion items of produce and the thick cushioning absorbs knocks and keeps the produce in position throughout the rigors of distribution.

Fruit pads can be used as a top or bottom cushioning pad for boxed fruit and a shock absorbing base pad for rigid containers; cushioning is unaffected by controlled atmosphere environments.

Paper pads provide cushioning protection for interleaving and wrapping applications. Options include: standard or heavyweight inner padding, brown or white standard or heavyweight papers.

Bespoke sizes and custom printing available subject to order quantity.

Converted Bubble Products

Jiffy have extensive conversion facilities and years of experience. We are able to convert our bubble products and bubble laminations into a variety of value added products, including converted bubble and foam sheets for punnets, cartons and trays.
