

# Famous for Protection

## ProFlex Profiles

The range of ProFlex profiles offers surface protection and edge protection to limitless packaging applications. They feature a chemically inert, odourless, clean, closed cell structure with excellent resiliency, flexibility and shape memory. Non-abrasive, ProFlex profiles are an excellent method of protecting delicate parts for a variety of markets and applications.

ProFlex profiles come in L shape and U tulip shape.

### ProFlex L

Available in 2 sizes, ProFlex L profiles are ideal for a variety of markets, and are perfect for use in the protection of spare parts, doors and panels, furniture edging, interior fixtures and fittings, and palletised products.

### ProFlex U

Available in a wide range of sizes, ProFlex U tulip profiles are widely used in a vast array of industries including window and glass distribution, office equipment, consumer electronics and doors and mirrors.

Perfect for the distribution of spare parts, furniture and windshields.

### ProFlex U Corners

Available in a variety of sizes, these convenient 90 degree cut pieces protect delicate corners in multiple applications, including picture frames, furniture, point of sale and large format printed items, plus many more.
