

Famous for protection

Astro Foam®

Successful product protection is about matching the right packaging material to the application. Low-density polyethylene is extruded to form thousands of tiny cells, each full of air and each cell combining with neighbouring cells to form a non cross linked foam.

Packaging foam is one of the more versatile packaging materials in use today.

Astro Foam®

Packaging foam is a gentle alternative to more traditional types of packaging such as corrugated paper and can be used to protect items that need special care and attention, offering protection from scuffing and abrasion.

Packaging foam is available in a variety of thicknesses, making it extremely versatile and suitable for a multitude of applications from delicate china to concrete blocks, furniture and consumer electronics and any items requiring gentle cushioning or interleaving protection.

Astro Foam is available in standard stock sizes, special slits and perforations are available on request.

Converted Foam Products

Converted products are an integral part of the Jiffy product range and the overall service that we offer.

Jiffy are able to convert Astro Foam and laminates into a variety of value added products.

Converted product options offer ease of use, portion control and tailor made protection suitable for a number of applications and industries. Jiffy offer a quick turn round, efficient service and competitive pricing.

Astro Foam® Converted Product Options

- Pouches, sleeves and sheets
- Stitched covers
- Mini rolls
- Furniture pouches

Foam can be perforated and slit on the roll to facilitate portion control.
